

UNITaxi

Hi Guys!

I had a very interesting discussion session a while ago and would like to share it with all of you...

Before I start... I would like you all to give a couple of minutes thought on the below plot.

What if humans have two planets to live! Guess what would the second planet be?

Give it a little thought guys!

Yes, you guessed it right.....MARS 😊

Hypothetically speaking what if the countries of the world have colonized different regions on MARS. Largest since the colonization of the American continent. The countries have imposed their jurisdiction and governance in their new claimed lands. Common public have started to migrate from the Earth to Mars to find new opportunities and start a new living 😊

How wonderful it would be to have well established networks and routes to travel from the Earth to Mars!

How exciting it would be to travel in the UNIVERSE!
Amazing if there is a Taxi service...!

How thrilling it would be to add such an experience in our lives!

Doesn't it sound great to you?

I am sure it does, as much as it does to me 😊

Well, of course all of this might seem like a dream now in the year 2017. However, **I am talking about the year 2100** 😊

It may be or may not be so farfetched though but it shouldn't stop us from pondering.

Being a visionary I am, I would like to believe that all of this possible by the year 2100 😊

What puzzles me is that, which mode of transport I would prefer to travel between the two planets?

I know public taxis are frequent and available but then there are also private Uber taxis which are flexible and luxurious.

I want your suggestion guys! Please help me pick one of them!

What according to you would provide us the most feasible journey in the universe in terms of cost, safety, time, and so on.

Let's discuss on this happening, exciting, thrilling topic in our next battle on 17-Oct-2017 at 2 PM in room number A103.
