

**Welcome
to the future**

**Welcome
to the future**

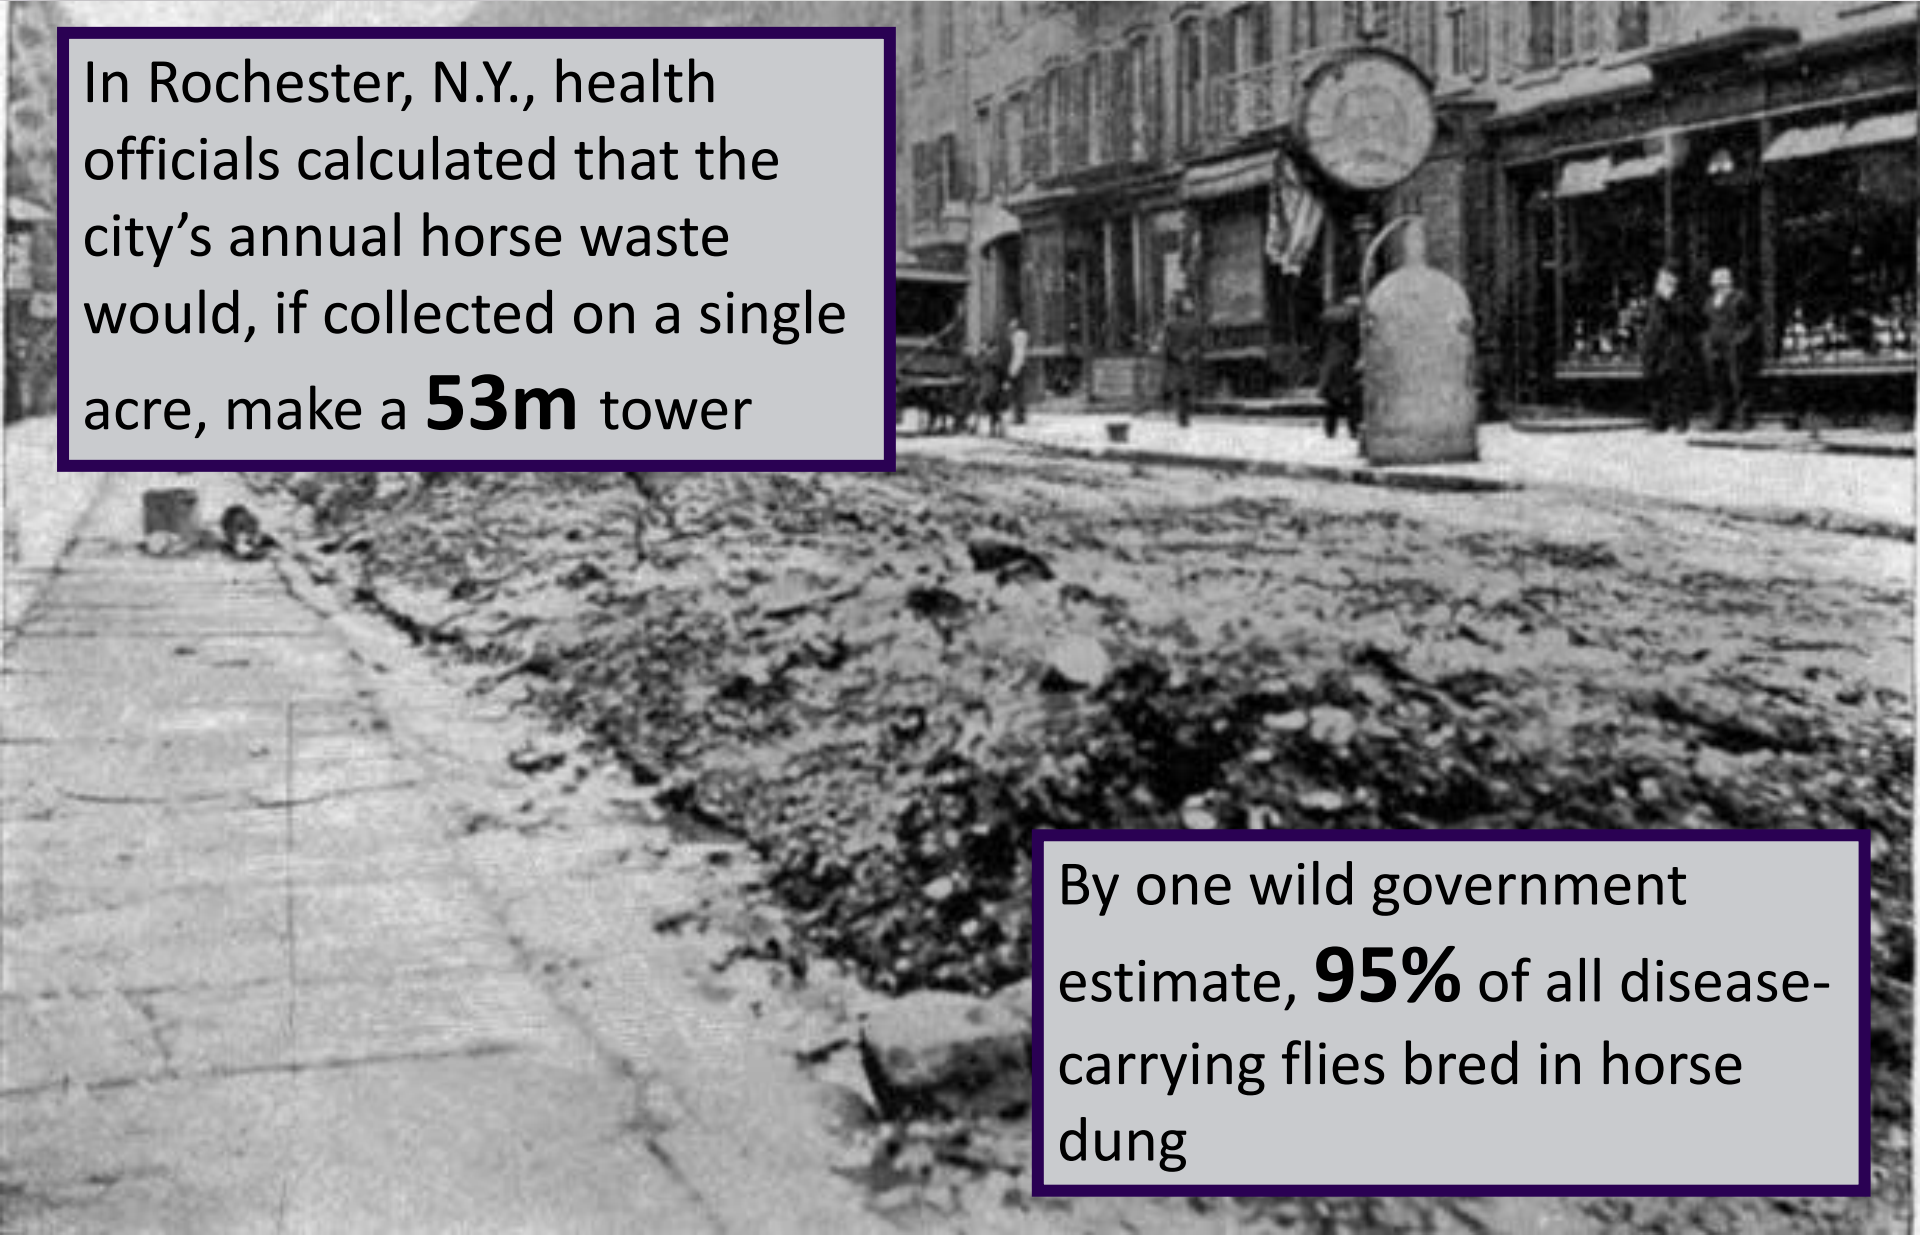

Today

“The world had seemingly reached the point where the largest cities could not survive without the horse but couldn't survive with it either”!

Horses...a problem!

In Rochester, N.Y., health officials calculated that the city's annual horse waste would, if collected on a single acre, make a **53m** tower

By one wild government estimate, **95%** of all disease-carrying flies bred in horse dung

Horses...a problem!

Dead horses everywhere...

Time to CHANGE!

Today

Tomorrow

ToChange

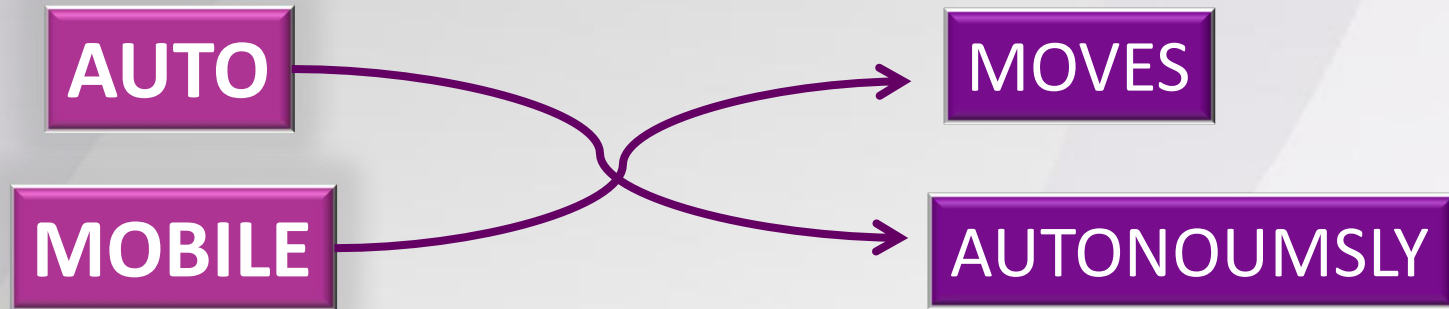

ToChange!

We have the
solution...

**OUR
AUTOMOBILE**

Why automobiles?

And it does not need to rest!

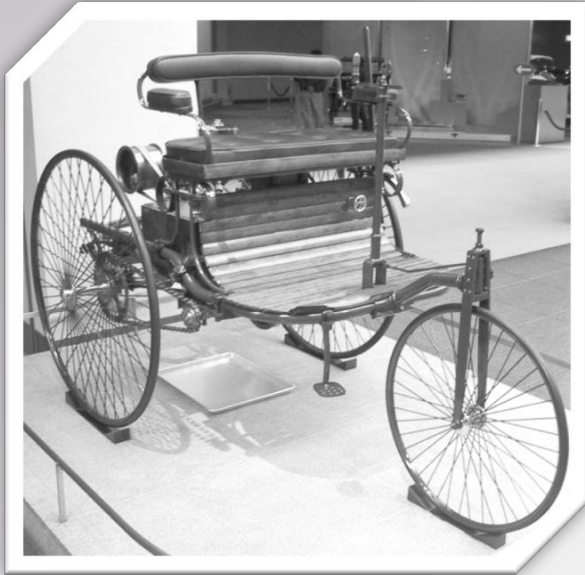

Why automobiles?

More comfortable...

... safer...

... and more reliable than a crazy horse!

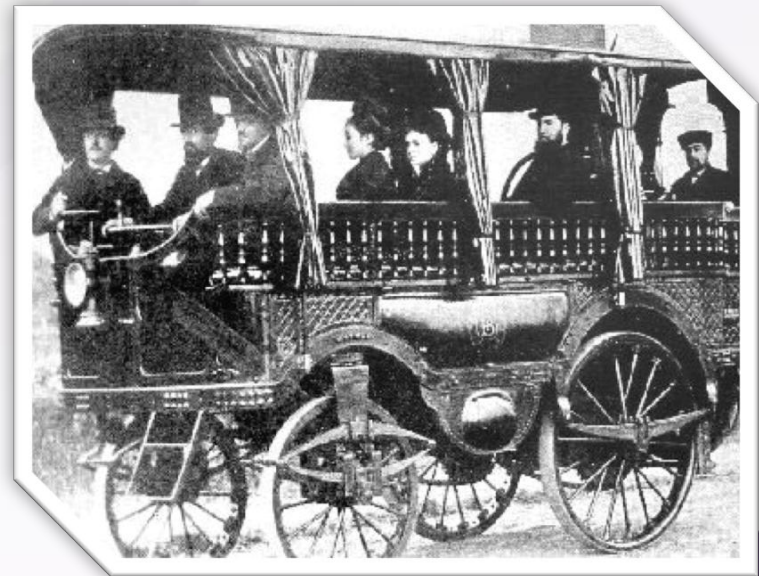

What we already have

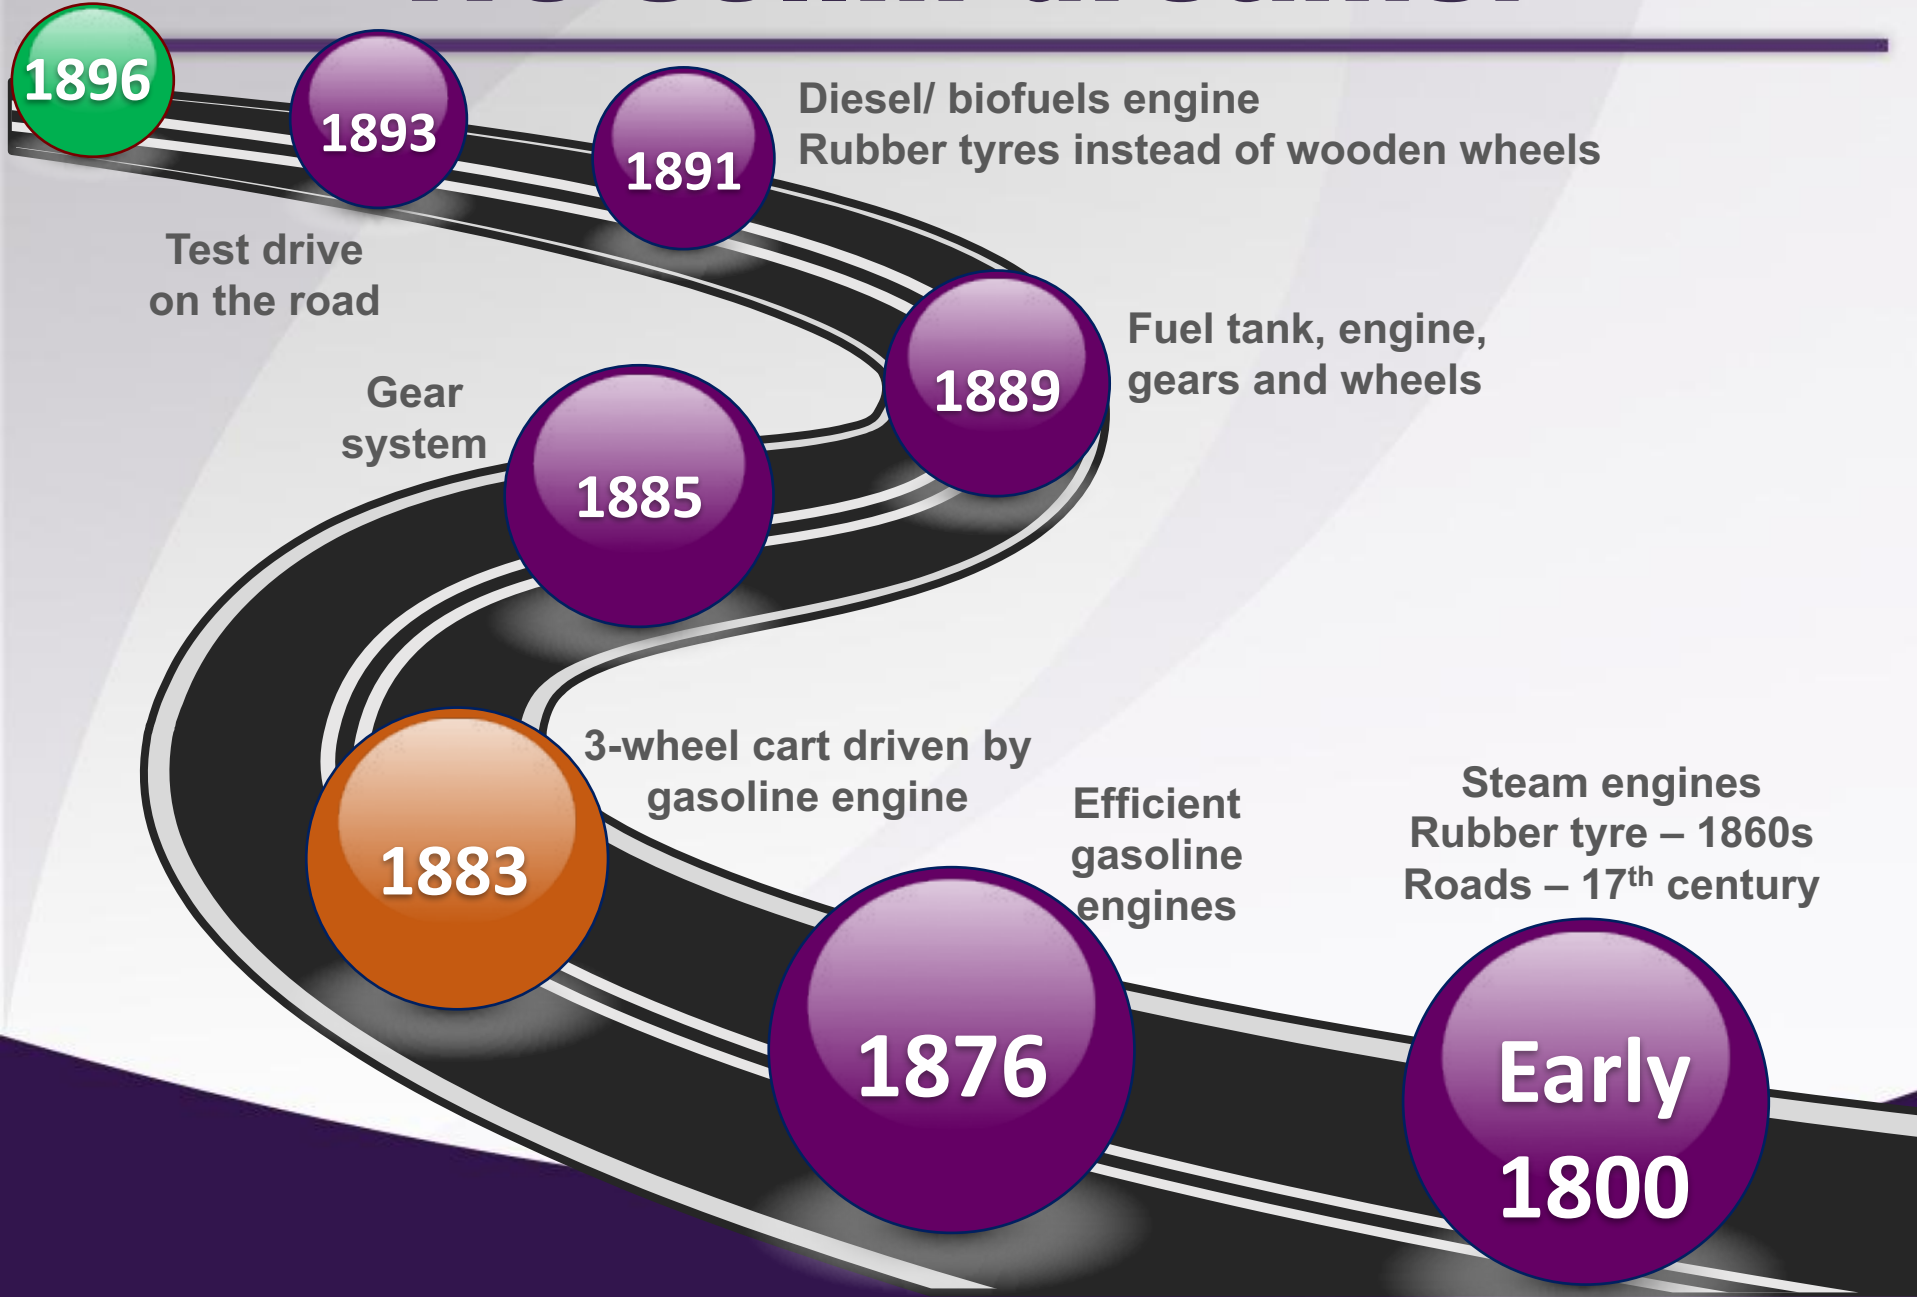

*London and North Western
1848*

Public railway system already connecting towns

First steam-powered bus in London

We sell... dreams!

1896

Test drive on the road

1893

Gear system

1891

Diesel/ biofuels engine
Rubber tyres instead of wooden wheels

1889

Fuel tank, engine, gears and wheels

1885

1883

3-wheel cart driven by gasoline engine

Efficient gasoline engines

1876

Steam engines
Rubber tyre – 1860s
Roads – 17th century

Early
1800

The end

Thanks for your attention
